

Comprehensive UX / Accessibility / QA Audit

Roujaune — personalised cycling training for riders over 50 | Read-only evaluation | Landscape web preview (1180×820) | No code modified

Overall UX Rating

7 / 10

9/9 journeys exercised — 0 blocked, 3 partial, 1 not observable

1. Executive Summary

All nine primary journeys were exercised end-to-end on the landscape web preview as the returning demo rider (Green Lantern, “From Couch to Road”, Week 1), plus a coach persona swap to Adriana. All ten navigation destinations open, the back button always works, and no dead-ends were found. The **coach system is a genuine strength** — persona changes propagate to the hero descriptor, coach card, plan “Adapted by...” line and the LLM plan-gate copy. The **Daily Check-in has excellent safety gating**, explicitly screening for chest pain, dizziness, shortness of breath, illness and new pain.

The main weaknesses for the 55–70 audience are: a **broken “READINESS” metric label** (renders one letter per line), **two coach-persona text leaks** that still say “Alberto” after switching to Adriana, a **banner-heavy Today screen** (three stacked promos push the hero below the fold), a **truncated “Benchmark W...” nav label**, and several **content/safety-tone gaps** (no “not medical advice” framing on Wellness; the FTP change shows the number but not the plain-language reason).

2. Task-Completion Results

J 1	First-time setup / onboarding	Partial	/onboarding reachable even when already onboarded (no redirect). Questions short, plain, age-appropriate; “See my recommendation” prominent. WHY-copy on fresh path not fully verifiable read-only.
J 2	Find & understand today's workout	Partial	Duration (~15 min), type (Strength), coach visible; “View Today's Workout” is an obvious CTA. FTP/TSS/zones not explained inline.
J 3	Adjust a workout	Partial	/checkin captures sleep, energy, motivation, soreness, stress + red-flag symptoms. Subtitle still says “Alberto” after swap; no explicit “only 45 minutes” shortcut.
J 4	Missed workout	Not observable	Could not simulate a missed session read-only; catch-up/safety messaging not evaluable.
J 5	Benchmark workout	Partial	Ramp Test recommended with WHY copy; zone preview clear; FTP change shown numerically but no plain-language reason; “Review with Alberto” leaks for Adriana.
J 6	Training plan	Completed	Persona-aware gate; 16-week “From Couch to Road” hero, goals, calendar, this-week plan render. “Advanced” not presented as universal — good.
J 7	Progress	Partial	Timeline + Benchmark Trends + Fitness Trend + Power Records + Recent Activities render. Two range vocabularies; no single 4-week improvement headline.
J 8	Wellness	Partial	Well-recovered narrative + FB50 + Recovery Vitals + Sleep chart. No “not medical advice” framing; sleep chart missing axes.
J 9	Help & error recovery	Completed	Help hub with FAQs + Message-coach CTA; back button works everywhere; no traps.

3. Issues by Severity

CRITICAL

No issue fully blocks a journey. The READINESS label and the persona leaks are severe but non-blocking, so they are classified as High.

HIGH

Screen / feature	Today → MetricSummaryStrip (READINESS cell)
Persona	All (worst for 67yo returning user)
Type	UX / Functional
Steps	Log in → Today → scroll to the bottom metric strip.
What happened	The “READINESS” label renders vertically, one letter per line (“RE / AD / IN / ES / S”).
Expected	A single horizontal label “READINESS”.
Impact	Looks broken and undermines trust in the data shown.
Recommendation	Give the last cell adequate width or wrap/scale the label correctly.
Screen / feature	Benchmark → plan-review banner CTA
Persona	Anyone using Adriana
Type	Content / Functional
Steps	Settings → select Adriana → open Benchmark Workouts.
What happened	CTA still reads “Review with Alberto”.
Expected	“Review with Adriana”.
Impact	Breaks coach consistency and trust in personalisation.
Recommendation	Interpolate the active coach via useCoach().name.
Screen / feature	Check-in → subtitle
Persona	Anyone using Adriana
Type	Content / Functional
Steps	Select Adriana → open the Daily Check-in.
What happened	Subtitle still reads “...so Alberto can tune today's ride.”
Expected	The currently-selected coach's name.
Impact	Inconsistent voice on a safety-critical readiness flow.
Recommendation	Interpolate the active coach name in the subtitle.
Screen / feature	Today → banner stack
Persona	67yo, low-confidence
Type	UX
Steps	Log in as a returning rider with an active benchmark week + pending FTP review.
What happened	Three stacked banners (plan-updated + FTP-review 287→305W + benchmark-reminder) render above the hero.
Expected	One clear “what to do next”.
Impact	High cognitive load; hero + Today's Workout pushed below the fold at 820px height.
Recommendation	Consolidate into a single rotating “What's new” slot / priority queue.
Screen / feature	Side navigation → “Benchmark Workouts”
Persona	Low-confidence / low-vision
Type	UX / Accessibility

Steps	Open any screen and read the left rail at 1180px.
What happened	Label truncates to “Benchmark W...”.
Expected	The full, readable label.
Impact	A core nav item is unreadable.
Recommendation	Widen the rail, allow a two-line label, or shorten safely (nav ORDER stays locked — product decision).

MEDIUM

- **Nav first-item label “Today” vs spec “Home”** (src/data.ts:11) — content; flagged for product decision, not silently changed.
- **Progress range vocabularies inconsistent** — “Week/Month/3M/6M/1Y” vs “4w/3m/6m/12m/All” shown side by side — UX/content.
- **Wellness — no “not medical advice” framing** — HRV / Resting HR / Stress presented like clinical readings — content/safety.
- **Wellness Sleep chart** — no x-axis (days) or y-axis (hours); purple-vs-yellow bars unexplained — UX/accessibility (colour-alone).
- **“Younger Male” rider identity chip** on Virtual Routes — off-tone for a 50+ audience — content.
- **Plan-gate CTA hierarchy** — the lighter “Choose another test or a submaximal option” is a small low-contrast link vs two large boxes; the tired/time-limited persona will miss the safe/easy option — UX.
- **Today hero duplication** — the right overlay card repeats the coach card's workout with a second CTA doing the same thing — UX.

LOW

- **Today header pills** (flame / bell / GL avatar) ~28–32px — below the 44×44 touch minimum — accessibility.
- **props.pointerEvents deprecation warning** on load (RN Web, likely the Toast in app/index.tsx) — functional/tech-debt.
- **Login has no testIDs** on email/password/submit; “Continue with Google” on web won't complete without a note — functional/QA.
- **/onboarding reachable by already-onboarded users** with no redirect/confirm — a returning user could accidentally re-run setup — UX/functional.
- **No visible keyboard focus ring** on rail items/buttons — accessibility.

4. Inconsistent Wording / Terminology

- “Today” (nav) vs “Home” (spec).
- Progress ranges: “Week/Month/3 Months/6 Months/1 Year” vs “4w/3m/6m/12m/All”.
- “Review with Alberto” / “...so Alberto can tune...” persist under Adriana.
- Two CTAs for one action: “View Today's Workout” vs “Open Today's Training”.

5. Accessibility Findings

- Touch targets: Today header pills below 44×44.
- Colour-alone signals: Stress dot and sleep-bar colour carry meaning without text/labels.
- Missing chart axes (sleep) reduce interpretability.
- No visible keyboard focus indicators; login inputs lack testIDs/labels for assistive tooling.
- Truncated nav label reduces readability for low-vision / low-confidence users.

6. Positive Aspects to Preserve

- High-quality coach system — persona propagation across hero, coach card, plan “Adapted by...”, and plan-gate copy.

- Warm, plain-language plan gate (“Submaximal assessment recommended”) — ideal for the 67yo persona.
- Daily Check-in's explicit red-flag symptom screening — calm, effective safety gating.
- Full-width landscape layout is clean; benchmark zone before/after transparency.
- Connections honestly labels Apple Health as “Needs app build” rather than hiding it.

7. Prioritised Improvement Backlog

P0	Fix READINESS metric-cell layout; fix the two coach persona leaks (Benchmark CTA + Check-in subtitle).
P1	Resolve “Benchmark W...” truncation; consolidate the 3 Today banners into one; elevate the plan-gate lighter/45-min option; add “not medical advice” framing on Wellness.
P2	Normalise Progress range labels; add Sleep chart axes; rename “Younger Male” identity; enlarge Today header pills to 44×44.
P3	Reconcile “Today” vs “Home” nav label (product decision); clean up pointerEvents warning; add login testIDs; guard /onboarding for returning users; add keyboard focus rings.

8. Evidence & Artefacts

- Full machine-readable report: `/app/test_reports/iteration_50.json`
- 17 evidence screenshots: `/app/test_reports/screens/` (Today, all nav destinations, Adriana-selected states, check-in, onboarding, plan, benchmark, progress, wellness, settings).

Read-only audit — no application code, wording, navigation or functionality was modified. No recommendations will be implemented until explicitly approved.
